I bridge the gap between complex AI orchestration, scalable full-stack architecture, and production-grade DevOps. At Help Study Abroad, I build LangChain-powered agentic systems — including intelligent Jira automation agents — applying GenAI to real operational challenges.

From architecting MERN applications and Solidity smart contracts to managing Kubernetes clusters, Docker pipelines, ArgoCD deployments, and AWS infrastructure — I own the full stack, end to end. I turn complex technical problems into clean, scalable, user-centric products.
